

Change of Minimum Order Quantity (MOQ) on System Sensor Products

May 2021

System Sensor Europe has recently brought some important changes in Trieste production plant Equipment, which will lead to Minimum Order Quantity modification.

Initially this will have impact only on some high-runner detectors (listed below), later this year on the whole range of point detectors (addressable and conventional) and modules.

Starting the 12th of July 2021, the following products will be supplied in a new MOQ, always in their current packaging style (10 or 5 detectors in a carton master box + carton shipping box). *(No change to packaging design for now)*
